Drawing and Measuring your Windows & Doors

To be able to give you an accurate price, we need some help from you, our clients. You will need to provide some information about the doors and windows, where they will be going and what they might look like.

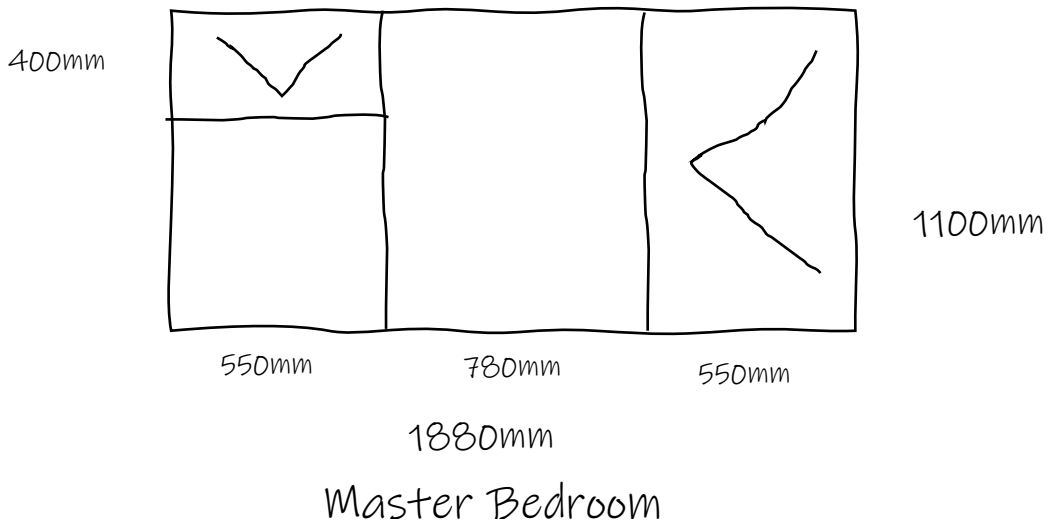

Step One: Draw the window or door

It is helpful to indicate how many sections and opening sashes you would like so the quote is more accurate. Below is an example, it has 3 sections and two opening sashes. 1 awning (hung from the top) and one casement (hung from the side, it can open left or right, this one is a right)

Step Two: Add dimensions and a name

Label your window or door with a name so they can easily be identified later. Then measure the distance horizontally, then vertically, then sections (if applicable) and add these measurements to the drawing. Ideally measurements are taken over all the frame, but this can be a little tricky if there is architrave covering it – go with the bigger measurement as this way you will know the price won't be any more expensive when it comes time to do a full site measure.

Door and Window Plan Grab a tape measure and let's get started!

Step Three: Creating a Wishlist- For Perfect Joinery!

Customer Details

Name	Date
Email	Contact Number
Site Address	Reno ☐ New Build ☐
